APPLIED NUMERICAL MATHEMATICS

Author Index—Volume 27 (1998)

(The issue number is given in front of page numbers)

Abarbanel, S. and D. Gottlieb, On the construction and analysis of absorbing layers in CEM (4) 331–340

Benazzouz, A., GL(E)-quasilinear transformations and acceleration (2) 109–122

Butcher, J.C. and Z. Jackiewicz, Construction of high order diagonally implicit multistage integration methods for ordinary differential equations (1) 1–12

Cao, Z.-H., On the QMR approach for iterative methods including coupled three-term recurrences for solving non-symmetric linear systems (2) 123–140

Cao, Z.-H., A convergence theorem on an extrapolated iterative method and its applications (3) 203–209

Chatzipantelidis, P., Explicit multistep methods for nonstiff partial differential equations (1) 13–31

Clavero, C., J.C. Jorge, F. Lisbona and G.I. Shishkin, A fractional step method on a special mesh for the resolution of multidimensional evolutionary convection–diffusion problems (3) 211–231

Davies, P.J., A stability analysis of a time marching scheme for the general surface electric field integral equation (1) 33–57

De Meyer, H., see **Van Daele, M.** (1) 69–82

Engquist, B. and H.-K. Zhao, Absorbing boundary conditions for domain decomposition (4) 341–365

Givoli, D. and I. Patlashenko, Optimal local non-reflecting boundary conditions (4) 367–384

Golub, G.H., see **Zhang, T.** (2) 185–202

Goodrich, J., see **Hagstrom, T.** (4) 385–402

Gottlieb, D., see **Abarbanel, S.** (4) 331–340

Hagstrom, T. and J. Goodrich, Experiments with approximate radiation boundary conditions for computational aeroacoustics (4) 385–402

Hagstrom, T. and S.I. Hariharan, A formulation of asymptotic and exact boundary conditions using local operators (4) 403–416

Harari, I., A unified variational approach to domain-based computation of exterior problems of time-harmonic acoustics (4) 417–441

Hariharan, S.I., see **Hagstrom, T.** (4) 403–416

Jackiewicz, Z., see **Butcher, J.C.** (1) 1–12

Jorge, J.C., see **Clavero, C.** (3) 211–231

Knight, D.D., see **Okong'o, N.** (3) 269–308

Laburta, M.P., Starting algorithms for implicit Runge–Kutta–Nyström methods (3) 233–251

Law, K.H., see **Zhang, T.** (2) 185–202

Li, Z., The immersed interface method using a finite element formulation (3) 253–267

Lisbona, F., see **Clavero, C.** (3) 211–231

Elsevier Science B.V.

Lu, Y.Y., A complex coefficient rational approximation of $\sqrt{1+x}$ (2) 141–154

Malhotra, M., see **Oberai, A.A.** (4) 443–464

Oberai, A.A., M. Malhotra and P.M. Pinsky, On the implementation of the Dirichlet-to-Neumann radiation condition for iterative solution of the Helmholtz equation (4) 443–464

Okong'o, N. and D.D. Knight, Implicit unstructured Navier–Stokes simulation of leading edge separation over a pitching airfoil (3) 269–308

Patlashenko, I., see **Givoli, D.** (4) 367–384

Petzold, L.R., see **Zhu, W.** (3) 309–325

Pinsky, P.M., see **Oberai, A.A.** (4) 443–464

Shishkin, G.I., see **Clavero, C.** (3) 211–231

Tarrazo, M., Calculating uncertainty intervals in approximate equation systems (1) 59–67

Tsynkov, S.V., Numerical solution of problems on unbounded domains. A review (4) 465–532

Turkel, E. and A. Yefet, Absorbing PML boundary layers for wave-like equations (4) 533–557

Van Daele, M., H. De Meyer, T. Van Hecke and G. Vanden Berghe, On a class of P-stable mono-implicit Runge–Kutta–Nyström methods (1) 69–82

Vanden Berghe, G., see **Van Daele, M.** (1) 69–82

Van Hecke, T., see **Van Daele, M.** (1) 69–82

Van Leersum, J., A numerical model of a high performance two-stroke engine (1) 83–108

Wain, R.J., Spurious fixed points of a variable step size, variable order, predictor corrector algorithm (2) 155–169

Wensch, J., An eight stage fourth order partitioned Rosenbrock method for multibody systems in index-3 formulation (2) 171–183

Yefet, A., see **Turkel, E.** (4) 533–557

Zhang, T., G.H. Golub and K.H. Law, Eigenvalue perturbation and generalized Krylov subspace method (2) 185–202

Zhao, H.-K., see **Engquist, B.** (4) 341–365

Zhu, W. and L.R. Petzold, Asymptotic stability of Hessenberg delay differential–algebraic equations of retarded or neutral type (3) 309–325
